SUMMARY

AI ENGINEER BUILDING PRODUCTION-GRADE AGENTIC WORKFLOWS, RAG PIPELINES, AND CLOUD-NATIVE AUTOMATION AT SCALE.

EDUCATION

MASTER'S IN COMPUTER APPLICATIONS 2001
MK University

SKILLS

AI & GENAI

Agentic AI, LangGraph, LangChain
RAG, OpenAI / Azure OpenAI
Prompt Engineering
LLM Orchestration, Evaluation
Guardrails, Observability
Embeddings, Fine-Tuning, Vector Search

PYTHON FOR AI

Python, FastAPI, Flask
NumPy, Pandas
FAISS, Pinecone, Chroma
Ray, Celery
Embedding Pipelines

CLOUD / MLOPS

AWS, GCP
Kubernetes, Docker
GitHub Actions, Jenkins
Model Serving, Monitoring
MLflow

DATA

PostgreSQL, MongoDB, Redis
Kafka, Vector Stores

ARCHITECTURE

LLM System Design
RAG Pipelines
Agent Workflows
Multi-Step Reasoning
EventDriven Systems
API Design
Inference Architecture

EXPERIENCE

ERCOT | SENIOR AI ENGINEER

Apr 2025 – Present | Taylor, TX

- Built an AI-powered feasibility screening platform using Machine Learning and Flask APIs, achieving ROC-AUC > 0.85 and automating resource onboarding decisions.
- Developed a Python-based payment monitoring solution using APScheduler and Pandas that automatically detects payment failures and generates actionable operational reports.
- Integrated AI-driven workflows into existing enterprise systems, reducing manual analysis and improving operational efficiency.

AMAZON ROBOTICS | SENIOR AI ENGINEER

Feb 2023 – Mar 2025 | North Reading, MA

- Built AI-enabled microservices supporting robotics manufacturing and warehouse automation.
- Designed data pipelines powering ML models for predictive maintenance and robotics telemetry analytics.
- Integrated ML inference endpoints into cloud-native systems to automate operational decision flows.

BIOGEN | AI SOLUTIONS ENGINEER

Jun 2022 – Jan 2023 | Durham, NC

- Integrated AI-based anomaly detection into supply-chain workflows to identify deviations in logistics and compliance events.
- Built secure data pipelines enabling ML forecasting models for demand planning and operational risk monitoring.

DELL TECHNOLOGIES | AI PLATFORM ARCHITECT / APPLICATION ARCHITECT

Jul 2015 – May 2022 | Austin, TX

- Architected cloud-native platforms supporting ML model hosting, inference APIs, and analytics pipelines.
- Integrated recommendation engines and predictive analytics into enterprise applications.
- Led modernization initiatives that enabled adoption of LLM-based internal tools for search, summarization, and workflow automation.

EARLIER EXPERIENCE | IBM, INNOMINDS, AND WELLS FARGO

- Delivered enterprise-scale solutions in eCommerce, financial services, PLM systems, and workflow automation using Java technologies, SOA, Spring, and web services.

KEY ACHIEVEMENTS

- Developed an AI-based feasibility prediction system replacing manual pre-screening processes.
- Automated payment failure detection and reporting using Python and Machine Learning technologies.
- Delivered enterprise cloud migrations and microservices transformations across multiple Fortune 500 organizations.
- Achieved 99.9% application availability through cloud-native architectures and DevOps automation.
- Reduced deployment times by up to 60% through CI/CD implementation and infrastructure automation.
